Professional Summary

Artificial Intelligence and Robotics Engineer with practical experience in developing machine learning models, data processing pipelines, and deep learning solutions using Python and modern AI frameworks. Experienced in applied AI projects including forecasting, data analysis, and image classification, with additional experience in computer science and robotics training. Ranked 2nd academically, with the ability to deliver data-driven AI solutions that enhance operational efficiency and support smarter decision-making for the organization.

Technical Skills

Artificial Intelligence & Machine Learning: Machine Learning, Deep Learning, Neural Networks, Predictive Modeling, Model Training, Model Evaluation, Hyperparameter Optimization

AI Frameworks & Libraries: TensorFlow, Keras, Scikit-learn, XGBoost, LightGBM, CatBoost, Optuna

Data Science & Data Processing: Pandas, NumPy, Data Cleaning, Data Preprocessing, Feature Engineering, Data Transformation, Data Analysis, JSON, Apache Parquet

Programming Languages: Python, SQL, C++, JavaScript, Kotlin, Arduino C

Development Tools: Git, Linux, Bash, Ubuntu Command Line

Professional Experience

Computer Science & Robotics Instructor

Al-Namothaj School for Special Education | Amman, Jordan

- Delivered practical training in computer science and robotics, enabling students to understand programming concepts through hands-on activities.
- Developed simplified learning materials for complex technical concepts, improving students' understanding and application of programming skills.
- Designed interactive technical activities that enhanced students' problem-solving abilities and computational thinking skills.

Technical Projects

Seasonal Temperature Forecasting Pipeline

Technologies: Python, LightGBM, CatBoost, XGBoost, Optuna, Scikit-learn

Developed a machine learning model for seasonal temperature forecasting, enabling analysis of climate patterns and generating data-driven future predictions.

New York City Collision Data ETL Pipeline

Technologies: Python, Pandas, NumPy, JSON, Apache Parquet

Built a data processing pipeline to clean, transform, and organize large-scale collision datasets, improving data quality and preparing it for analysis and insight extraction.

Binary Image Classification Using Convolutional Neural Networks (CNN)

Technologies: Python, TensorFlow, Keras, NumPy, Matplotlib

Developed a deep learning model for automated image classification, enabling pattern recognition through convolutional neural network techniques.

Education

Artificial Intelligence and Robotics Engineering

Graduation Date: 2024

GPA: 83.3%

Ranked 2nd in class

Technical Training & Certifications

Data Science and Artificial Intelligence Training — SHAI for AI

Practical Training Program — Infotel

Artificial Intelligence and Machine Learning in Medical Applications

Course — The Hope International

Python for Machine Learning Certificate — Pro Vision

Languages

Arabic — Native

English — Advanced

Japanese — Intermediate
